

**ENGLISH (ENG)**  
**TREATING CHAIN SAW MOTORS AND CHAINS WITH**  
**RVS TECHNOLOGY® CHAIN SAW TREATMENT**

Every package contains a bottle with 90 ml (3.04 oz) of mixture of RVS compound and special oil. The bottle contains the amount of the RVS compound required for:

- treating both a chain saw motor and a sawing chain once; or
- treating a chain twice

Use a half (1/2) of the contents of the bottle for treating the motor, and the other half (1/2) for treating the sawing chain.

You may need to carry out a double treatment for a full treatment of a seriously worn motor. The second treatment procedure shall be carried out after you have used the device being treated for 4 to 6 engine hours after the first treatment procedure.

Notice that you may use the RVS Technology® 2-Stroke Engine Treatment product for treating two-stroke engines in motorcycles, mopeds, outboard motors, snowmobiles, lawn mowers etc.

**The treatment step by step:**

1. Shake the bottle well (20–30 sec.) until the mixture is homogenous. There must not remain any sediment on the bottom of the bottle. The bottle contains 90 ml of a mixture of special synthetic oil and RVS Technology® compound.
2. Dilute one half (1/2) of the bottle contents with five (5) liters (1.32 US gallon) of fuel and oil mixture prepared earlier (gasoline with 2-stroke motor oil).
3. Pour the prepared mixture containing the RVS compound in the fuel tank and let the motor idle for 15 to 20 minutes.
4. Use the chain saw as usual (avoid stops during the first hour if possible).

**For treating one sawing chain:**

Dilute one half (1/2) of the bottle contents with a liter (0.26 US gallon) of oil normally used for the chain lubrication and use this mixture in accordance with the instructions of the device for chain lubrication until the mixture becomes totally consumed.

Sawing chains of electric chain saws are treated identically with the above instructions.

**ATTENTION!** After 15 minutes of sawing, check the chain strain. In case it is needed, **loosen the chain strain**. During the treatment procedure, it is recommended to control the strain of the sawing chain.

**Storing and safety instructions**

- Store at temperatures below +40 °C (105 °F).
- In case of skin contact, wash with lukewarm water and soap.
- If the product gets in your eyes, it may cause irritation – flush with water and consult a doctor if the irritation continues.
- If the product is swallowed, flush the mouth with water and consult a doctor. Do not induce vomiting!
- In case of fire, any extinguishing materials except water can be used. Keep the product out of reach of children.
